ertex Safety glass railings

The see-through fall protection

We do not recommend an unprotected glass edge when working with laminated safety glass!

Customisable fall protection with an individual appearance tailored to your building project and expectations **ertex** laminated safety glass (LSG) can either be clamped to the floor with bottom profiles without any further supporting structures, or it can be used as an infill panel between stainless steel profiles with a load-distributing handrail.

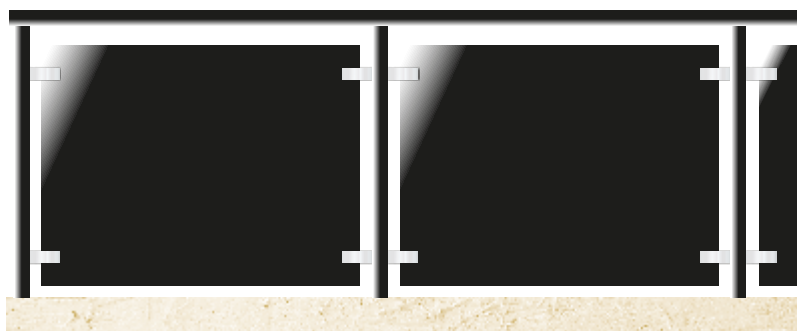

A Balustrade

B Railing infill panel

C Point-mounted infill panel

Each piece is unique

Customised solutions according to your wishes and for your benefit – directly from one source

Your project is unique.

We take the relevant conditions into account and comply with recognised technological rules.

Benefits at a glance:

- Glass is the only natural building material that allows the sun to shine through
- LSG can be made of thermally bonded primary products
- LSG can contend with normally expected forces on the glass in a controlled manner
- LSG is also suited to exclusively point-mounted applications
- LSG can be produced with transparent to opaque or light-scattering properties
- Coloured LSG or LSG Spektral integrates seamlessly into the visual appearance
- With LSG, there are no limits to your creative designs
- LSG maintains its residual load capacity even in the event of damage
- Even with individual designs, the glass surface remains easy to maintain

We are happy to provide you with further information about the building authorities' protection regulations for fall protection. Your local representative is available to answer all your questions.
